## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 50-56 and 58-61, and 64-80 rejected under 35 U.S.C. 103(a) as being unpatentable over Wideman (US 3510382) in view of Jacobson substantially as set forth on page 3 of the last Office action.

Claim 50 now recites a plurality of longitudinally configured and spaced webs running along the length of the tube. Note that at column 1, line 51-55 Jacobson teaches that reinforcing threads may be wound a longitudinally traveling film. It would have been obvious to have provided a plurality of such films depending upon the degree of longitudinal strength that is required.

### ***Response to Arguments***

Applicant's arguments filed December 8, 2006, have been fully considered but they are not persuasive.

The argument that the present claims are distinguished from Wideman since Wideman does not use a plastic film is not found persuasive as the Examiner acknowledged in the last Office action that Wideman did not use plastic films. Jacobson was relied upon for teaching the use of thermoplastic materials.

Art Unit: 1771

The arguments that Jacobson is distinct from the invention because the material of the tube is slit are unpersuasive as applicant's specification teaches that the materials claimed here may be slit in the same manner.

It is not seen that the use of the term dam, pond, or canal liner add any particular structure to what is presently claimed.

The argument that Wideman does not form a tube is unpersuasive as the webs of Wideman are wrapped around a mandrel which would inherently produce a tube. See column 1, lines 21-26 of the reference.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
